MAKE YOUR LIFE MOSQUITO PROOF

Outdoor Mosquito Eliminating System

MOSQUITO

**BORNE DISEASES CAN BE
LIFE-THREATENING AND FATAL**

Mosquitoes are present everywhere and all times. They are found in places of living, leisure, business or work and throughout day and night. Their mere presence can be distracting and irritating and their bite, life-threatening and even fatal.

In India alone, around 50,000 people annually fall victim to mosquito-borne diseases like Chikungunya, Dengue, Malaria, Japanese encephalitis and Lymphatic filariasis. They are stubborn and persistent in their quest for blood and thus their threat need to be taken seriously and immediately.

OUR SOLUTIONS FOR MOSQUITO ELIMINATION

The BG-Mosquitaire™ comes with the famous Sweetscent lure, is the outdoor model, large terraces, it can be declined in several aspects depending on the environment and used as part of the PROTECTED AREA © concept

BG-MOSQUITAIRE Co2 CATCHES ALL MOSQUITO SPECIES

The BG-Mosquitaire CO2 is an excellent trap for all mosquito species and other flying blood-feeding insects. The sturdy plastic trap is designed to be placed on the ground. It uses the same patented capture technology of all Biogents traps with the additional use of pure CO₂, which is an attractive key element of human respiration and the most important attractant for blood-feeding insects.

BG-MOSQUITAIRE CATCHES TIGER MOSQUITO SPECIES

The BG-Mosquitaire has been specifically developed for use against tiger mosquitoes. It features a patented combination of attractive visual signals, a specific air plume that mimics convection currents created by a human body and a patented mix of artificial skin emanations (BG-Sweetscent) that are released through a large surface area. The BG-Mosquitaire trap catches significantly more tiger mosquitoes than other traps without carbon dioxide. Using the CO₂-versions, that is with the addition of carbon dioxide, the trapping performance can be raised further up to four times.

Sustainable and
environment friendly solutions

Already being sold as trusted
mosquito elimination solution
in 23 countries.

Suitable for small and
Medium properties
or area like 8000 to 12000 sqft

Outdoor product designed and
manufactured for suiting Indian
weather condition.

Based on intensive research and
development done for 16 yrs
by Biogents Germany .

No chemicals being used

OUTDOOR MOSQUITO CONTROL SOLUTIONS

BEST SUITED FOR

Farm Houses

Small Bungalow

Apartment

Restaurant

HOW IT WORKS?

The Biogents mosquito trap uses attractant Sweetscent to lure the mosquitoes to the vicinity of the trap. Once close the high powered vortex will suck the mosquitoes into a catch bag. The strong suction is designed in such a way that the attractant scent is free of the suction as a cloud to form over the trap. Place the mosquito trap near the mosquito resting areas and breeding places, thus the trap will catch the mosquitoes before they reach the home or work area.

Many scientific tests have been done on the effectiveness of mosquito traps. Biogents continue to come out on top when compared to other traps such as mosquito magnet.
